

Project 1 Information

Project 1 Information

- **Client:** **Splashes**

Type of Business: Children Swimming Lesson

Your task:

- As a developer in a small team, you are task to code and build a website for the client.
- The design team has just finalized the page design mockups and now ready to move to the development stage of the project.
- Your project manager called on a team meeting to discuss the project.

Project 1 Information

- In the team meeting, the following direction were discussed:
 - use front-end technology – html5, css3, javascript, jquery
 - use css reset
 - the register/sign in form will open on to a modal
 - site is responsive at standard breakpoints
 - site tested on all popular browsers and platforms
 - must code to the specifications based on page mockup designs
- Other information:
 - Go over the project 1 specifications – download from GAP
 - Page mockup designs – download [here](#) (link works only when you access using your Westcliff email)

Project 1 Information

- This a team project. You will be grouped in a 4-member team:
 - Red Team
 - Group 1
 - Yellow Team
 - Group 2
- Each team will have a channel on slack:
 - An invite will be sent to join your team channel
- Each team should elect a lead developer. Post on your channel who the team lead is. Post by next Friday.
- Project Due:
 - end of Week 8 (Session 1)

Project 1 Information

- Team Work Recommendations:
 - In the initial part of team discussion – lead developer should set a direction for the team to layout the code architecture for the site. The architecture will serve as the template for the team to use moving forward.
 - Lead developer should delegate team member responsibilities.
 - Discuss how work should be divided. Consider number of pages per member (there are 8 pages in total) or by devices (ie. mobile vs desktop) and so on.
